The useful sections (3), e.g. visiting cards,  
tickets, labels, assigned to the carrier piece (2),  
are produced from a continuous sheet of material  
(10). Stamped, cut or similarly produced lines of  
weakness (11) are produced across (7) the latter

(10)

but leaving a margin at both long sides (12).

The carrier piece is arranged along the sheet  
material. The flat side of the latter is glued or  
adhered to the former to cover over the lines of  
weakness. The useful sections are then separated out  
by stamping or cutting. Printing on the separate  
useful pieces can be by the customary printing  
machine, laser or photo copiers.

ADVANTAGE - Separate pieces of right format  
produced without any ragged edges remaining.
